Extra Cartridge Filter Fitting Instructions for W792 and W792/3

When fitting the CF2024 Cartridge filters to the W792 or W792/3 twin bag dust extractors the paddle handle must be fitted on top of the cartridge as shown in the image opposite. This will allow for both paddles to be able to turn a full rotation.

The cartridges will be tight to fit on next to each other but will go on.

Cleaning Routine

To clean the filter, daily (or after each use if used less frequently) make one complete rotation of the handle in both clockwise and anti-clockwise directions.

This will dislodge trapped dust particles which will fall into the collection bag.
